

## natural aromatherapy remedies for pets

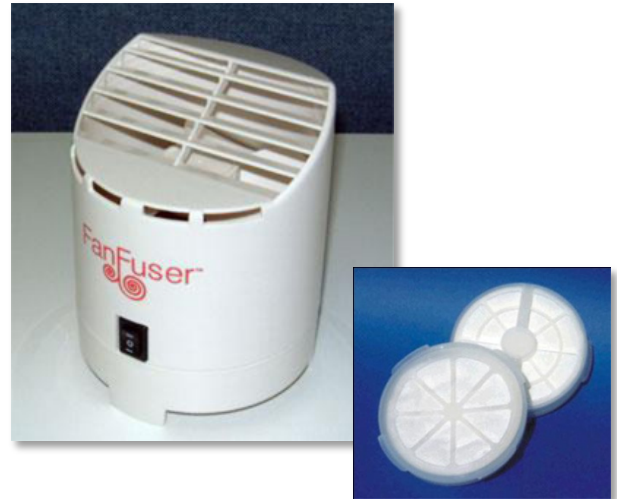

### diffuser instructions...

#### **Aromatherapy Fan Diffuser:** \*

- Ideal for rooms up to 500 square feet.
- Includes a 2-speed fan diffuser & 2 pads.

#### **Specifications:**

- Dimensions: 7"H X 5" Diameter
- Voltage: 110 V
- Current: 0.22 A
- Wattage: 24
- UL/CE Certified: No

#### **Directions:**

- Turn diffuser over and gently twist the diffuser pad located on the bottom counter-clockwise until it releases.
- Place a few drops (start with 3 or 4 and increase to 8 or 10) onto one pie section of the absorbent inside surface of the diffuser pad (side that faces up when diffuser is placed on a surface). You can use the same pie section until it is hard and non-absorptive.
- Twist diffuser pad clockwise onto the diffuser unit.
- Place the diffuser on a flat, stable surface. The best height is between 3 and 6 feet above the floor, which improves circulation time and efficacy.
- Plug diffuser into a 120V (US) wall outlet and switch diffuser on using the two-position rocker switch on front of unit.
- Besides scent intensity, you can use behavior to determine number of drops and time interval needed for your coverage area by behavior: for example, dogs in a kennel may get restless or vocal when diffuser needs to be replenished.
- Replacement pads and essential oils are available for purchase.

\*Non-returnable after use\*
